Full Stack System Development Instructions

Project Title: Your custom Ecommerce, Business, or Corporate Website Solution

Tech Stack:

- **Frontend:** HTML/CSS/JavaScript or React
- **Backend:** Node.js with Express.js
- **Database:** MongoDB (via Mongoose)
- **API:** RESTful API

1. Project Setup

- Create two main folders: /client (frontend) and /server (backend)
- Initialize Node.js backend and install dependencies
- Setup .env for secrets (like DB URI)

2. Backend Development

- Build RESTful APIs using Express.js
- Connect to MongoDB for data storage
- Create routes for:
    - Products/Services
    - Users
    - Contact Form

3. Frontend Development

- Build UI with HTML/CSS or use React
- Create key pages:
    - Home
    - About
    - Products/Services

    - Contact

- Connect frontend to backend via API calls (e.g., fetch/axios)

5. Final Checklist

- Backend API is working and connected to database
- Frontend fetches data from backend
- Mobile responsive design
