Final Project Evaluation Rubric

Total: 100 Points

Criteria	Excellent (Full Marks)	Good	Needs Improvement	Points
1. Functionality (Core Features)	All main features work perfectly; smooth integration between frontend, backend, and database.	Most features work; minor bugs or missing functions.	Many features are broken or missing.	/25
2. Design & User Experience (UI/UX)	Clean, responsive, and user-friendly interface; intuitive navigation.	Acceptable layout and usability; basic responsiveness.	Poor design or non-responsive layout.	/15
3. Code Quality & Structure	Code is clean, modular, readable, and well-commented; uses best practices.	Code works but may be messy, repetitive, or lack comments.	Poorly structured or hard-to-read code.	/10
4. API & Database Integration	REST API is well-structured and connects properly with database for all key features.	Partial API/database integration; some issues present.	Major issues or missing integration.	/20
5. Documentation	All sections (intro, problem, objectives, scope, limitations, etc.) are complete and clear.	Some sections missing or lacking detail.	Incomplete or unclear documentation.	/10
6. Creativity & Extra Features	Includes thoughtful features beyond basic requirements (e.g., admin panel, filters, animations).	Meets basic expectations with a few enhancements.	Lacks originality or additional functionality.	/10
7. Technical Completeness	Full stack integration is technically sound with proper data flow and logic.	Mostly complete with few bugs or inconsistencies.	Incomplete or buggy logic; core parts missing.	/10
