Target User/Organization and Short Documentation Instructions

For your full stack project (Ecommerce, Business, or Corporate Website), you must choose a **real or fictional company** as your **target user/client**. This will guide your website's design, content, and features.

Step-by-Step Guide:

1. Pick a Company Type

Choose from one of the following:

- **Small business** (e.g., bakery, car repair shop, fitness studio)
- **Startup** (e.g., tech, app-based, online service)
- **Mid-size company** (e.g., design agency, logistics, consulting firm)
- **Fictional company** (made-up brand with realistic purpose)

2. Choose the Industry

Examples:

- Technology
- Healthcare
- Education
- Travel & Tourism
- Food & Beverage
- Fashion
- Real Estate
- Automotive
- Finance

Tip: Use a **random industry generator** or pick one based on your interests.

3. Define Company Details

Include the following in your planning:

- **Company Name**

- **Industry & Services**
- **Target Audience**
- **Company Goals** (e.g., more customers, online presence, product showcase)
- **Website Purpose** (e.g., sell products, collect leads, show portfolio)

4. Write a One-Paragraph Brief

Write a short company profile (3–5 lines) that describes:

- Who they are
- What they offer
- Why they need a website

Example:

SwiftFix Auto is a local car repair shop in New York specializing in emergency repairs and regular servicing. They want a website to showcase services, accept appointment bookings, and attract new customers online.

Short Documentation

1. Introduction

- Briefly introduce the project.
- Mention the type of website (Ecommerce, Business, Corporate).
- State what technologies are used (Node.js, API, MongoDB, etc.).

Start with:

"This project is a full stack web application developed for [Company Name], designed to [main purpose]. It uses [technologies used]."

2. Problem Statement

- Describe the issue the company faces (e.g., no online presence, slow customer communication, manual data entry).
- Explain why a digital solution is needed.

Start with:

"[Company Name] currently faces challenges such as [problem]. This limits their ability to [business impact]."

3. Objectives

- List the goals of the project.
- Keep it short and in bullet points.

Examples:

- Develop a responsive website
- Build a backend API with Node.js
- Store and retrieve data from a database
- Deploy the system online

4. Scope

- Describe what features the system will include.
- Focus on what's covered in the project.

Start with:

"The system will include key pages such as Home, About, Services, and Contact. It will allow users to [main actions]."

5. Limitations

- Mention what your project will **not** include (due to time, tools, or scope).
- Be honest but professional.

Examples:

- No real-time chat feature
- Limited admin controls
- No payment gateway integration

6. Proposed Solution

- Explain how your project will solve the problem.
- Mention how the system works at a high level.

Start with:

"To address the problem, a web-based system will be developed using modern technologies. This will allow [main benefits]."

7. System Description

- Briefly describe each part of the system:
    - Frontend (what users see)
    - Backend (logic and API)

- Database (data storage)
- Deployment (where it's hosted)

Example:

“The frontend is built with React, allowing users to view services and send inquiries. The backend API (Node.js + Express) handles requests, connected to a MongoDB database. The site is deployed using Vercel and Render.”
